SUMMARY

- Software engineer with **5+ years** of experience specializing in backend engineering, software architecture, and blockchain.
- Over **2 years in fintech**, with strong understanding of financial reconciliation, compliance, and controls.
- Experienced in designing distributed systems, microservices, event-driven architectures, and cloud-native solutions.
- Focused on scalable, reliable, secure, and high-performance backend systems.
- Additional experience in data engineering, Databricks, AI, and modern web technologies.

EXPERIENCE

Maya

June 2025 – Present

Senior Software Engineer / Consultant

Remote

- Architected and led the **Crypto Receives** initiative, building backend workflows for blockchain deposit post completion processing including user identification, AML compliance checks, and funds settlement through internal ledger systems.
- Designed a reusable **multi-system reconciliation framework** that joins data across systems and validates transaction amounts, currencies, and ledger consistency across financial workflows.
- Built the backend orchestrator for crypto trading workflows, coordinating exchange order placement, wallet movements, state transitions, and ledger operations at an average **10 TPS**.
- Contributed to the **V1-to-V2 migration** of **50M+ transactions and 10M+ users**, including balances, transaction history, and correction of legacy data inconsistencies.
- Developed internal packages and tooling to improve developer experience and consistency across backend services.

Teliolabs Communications Inc.

July 2023 – May 2025

Software Engineer

Remote

- Led backend design across **5+ projects**, driving technical decisions for secure and scalable systems.
- Built a serverless fintech solution serving **12M+ users**, orchestrating dynamic workflows with AWS and reducing infrastructure costs by **50%**.
- Implemented BFF architecture integrating **10+ microservices and third-party APIs**, reducing API response times by **45%**; optimized MongoDB for high-volume workloads.
- Developed blockchain applications including an NFT marketplace with secure off-chain payments, integrating blockchain and traditional payment systems.

Teliolabs Communications Inc.

Dec 2021 – June 2023

Software Engineer Intern

Remote

- Developed and deployed web applications using the PERN stack, Docker, Nginx, and AWS.
- Designed database schemas and implemented backend business logic for production applications.

PROJECTS

Moneymesh | GraphQL

- Developed a personal finance platform that helps users record their transactions in a ledger-style transaction system.

Onchain Doc Editor | MERN, Socket, Solidity, IPFS

- Developed a real-time collaborative document editor leveraging the MERN stack and Socket.io for seamless multi-user interactions.
- Used IPFS to store documents in a decentralized way and ensures integrity by syncing versions on the blockchain.

SKILLS

Backend: Node.js, NestJS, Spring Boot, Microservices, Distributed Systems, Event-Driven Architecture, Serverless

Programming Languages: TypeScript, JavaScript, Java, C++, Python, Rust

Databases & Data: PostgreSQL, MongoDB, MySQL, Redis, Databricks

Cloud & DevOps: AWS, Docker, Kubernetes, Linux, Git

Blockchain: EVM, Solidity, Smart Contracts, IPFS, CCIP

Frontend: React, Redux, Tailwind CSS

EDUCATION

IIT Naya Raipur

Bachelor of Technology (CGPA: 9.12 / 10.00)

Army Public School

All India Senior School Certificate Examination (high school equivalent) (94.2%)

ACHIEVEMENTS

- Won Filecoin bounty at HackForTomorrow for building the best project using IPFS.
- Won a Ledger Nano S Hardware Wallet in the Tezasia hackathon.
- Successfully published research in conferences and a peer-reviewed journal.
